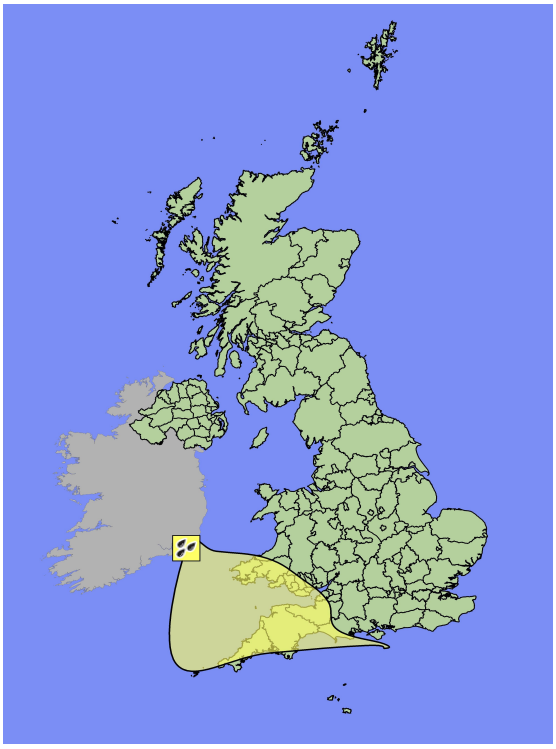
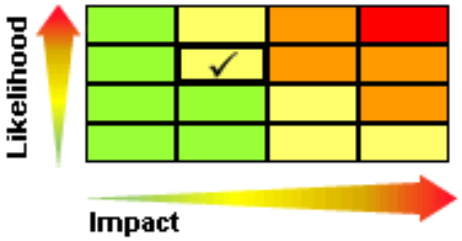
National Severe Weather Warning Service





Chief Forecasters Assessment
Following heavy rainfall in southern areas on Friday and Saturday there are strong signals for further heavy rain on Sunday and Monday. An additional 20-40mm could fall quite widely in the highlighted area with a risk of 60mm or more over high ground. This could lead to localised flooding, especially where the ground is saturated due to recent wet weather for example in parts of Wales and southwest England. Given the uncertainty over the detail the Public are advised to monitor forecasts closely and visit the web site for any updates which could include an extension of the risk area to some other parts of the UK.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Sun, 07th Oct 2012** until **23:55 on Mon, 08th Oct 2012**

Further periods of heavy rain are likely to affect Southwest England and parts of Wales during Sunday and Monday. There is still considerable uncertainty over the details of the heavy rain and the alert area shown adjusted as the event approaches.
The public should be aware of the possibility of disruption to travel due to localised flooding.
